DICE+ DEVELOPMENT KIT TO BE LAUNCHED DURING GDC 2013 IN SAN FRANCISCO

DICE+ is a new game controller in the shape of a die, created with one idea in mind: "Play together"

This new electronic device that communicates with tablets via Bluetooth was created by Game Technologies, a new tech company based in Europe.

Board games is the first category that comes to mind when you think about a die. But DICE+ can do much more than that. This electronic die is a full-fledged controller that can be used for any type of game and will change the way you think about dice.

Between March 25th and 29th Game Technologies will launch its DICE+ developer site, where the game-development community will be able to order a DICE+ Developer Kit for 99\$. The box will include:

- Electronic DICE+ in a custom casing
- 1x microUSB cable
- Documentation on how to handle this precious jewel
- And a special gift with a history lesson :)

The whole package will be sent free of charge.

On the website itself you will get access to:

- Android SDK
- iOS SDK
- Unity3D wrapper/assets
- Documentation
- Code examples/snippets

DICE+ will officially launch in Q3 of 2013, giving developers enough time to create cool and innovative games with this new controller.

Additionally, we will offer developers an interesting way to earn more money from their games. More details will be available in April.

While waiting for the site to go online, we encourage everyone to stay up-to-date by subscribing to our developer newsletter. Visit <http://dicepl.us/developers> and just subscribe :)
